

Collaboration Folders (cFolders)

Shape collaborative processes efficiently

Overview

In most companies many external partners are included in the workflow process. Therefore external partners need context oriented access to collaborative data in order to shape the processes efficiently. Ideally this is carried out with the support of the IT System in a secure environment. The data are managed for example in an SAP ERP system and are exchanged seamlessly through a data exchange platform including version support.

Data which are produced by external partners on the other side will be imported in the SAP ERP system effortlessly.

Until now most of these data were manually exported out of the SAP ERP system and send through email or other means of communication. The same is true the other way around for data import of external partners back into the SAP ERP system.

The challenge

- ✓ Simple and fast reproduction of collaboration and competitive scenarios and management of project teams.
- ✓ Role-, access- and version management for relevant documents.
- ✓ Reproduction and management of complex document-, CAD- or Bill of Material (BoM) structures.
- ✓ Consideration of the ECM data exchange.
- ✓ Support for proposal creation-, review- and approval processes.

Your benefit - our solution

In preparation of an implementation you face the challenge to adapt the extensive cFolders functionality with respect to organization, processes and functions to your individual requirements.

Here you profit from our analytical method, which is based on "Morphologischer Kasten" and identifies your requirements exactly. It's effective questionnaires and targeted approach leads quickly and efficiently to an overview of the necessary steps to establish a productive collaboration process in your organization.

Your internal and external collaboration will be optimally geared to your requirements with regards to organization, processes and function. The Solution facilitates a smooth and efficient process.

The screenshot shows the SAP mySAP PLM cFolders interface. The main area displays the 'Item 0030' details, including fields for Number, Material, Item Category, Quantity, Unit of Measure, Fixed Quantity, and Description. Below this is a 'Linked Documents' table and an 'Items' table showing the BOM structure.

Number	Component	Asm	Item Category	Quantity	Unit of Measure
0010	Hard disk 120GB cover HD120AC_C		Stock Item	1.000	Piece
0020	Hard disk frame HD120AC_F		Stock Item	1.000	Piece
0030	Hard disk base casing HD120AC_B		Stock Item	1.000	Piece
0040	Hard disk head/disc a HD120AC_H		Stock Item	2.000	Piece
0050	Hard disk technical s HD120AC_T		Stock Item	1.000	Piece

Functionality overview

- ✓ Hierarchical structuring of the different objects of collaborations: folder, documents, materials, BoMs and generic objects.
- ✓ Object specific authorizations to control data access
- ✓ Integrated visualization- and red-lining- functionality to render 2D- and 3D- objects.

- ✓ WebEx-Integration
- ✓ Search functionality
- ✓ Notification- and status management for process control via Email
- ✓ Integration to SAP PLM & SRM
- ✓ Handling large files through ftp
- ✓ Export/Import of CAD data and product structures to/from partners
- ✓ Automatic creation of neutral formats

Your benefit overview

- ✓ Individual requirement definition through complex analytical methods
- ✓ Optimal coordination of your internal and external collaboration with regard to organization
- ✓ Optimal coordination of your internal und external collaboration with regard to processes
- ✓ Optimal coordination of your internal und external collaboration with regard to functionality

YOUR SUCCESS-OUR GOAL

GOPA ITC is your international consulting service partner for the support and the successful completion of IT projects. We open new innovation potentials and convert visions efficiently from concept to a fully functioning IT Solution.
