Overview

One of the most important factors to ensure the competitiveness of a business is to reduce the cost and time of product development. Simultaneously you have to integrate different organizations, structures, processes, technologies and applications. The development process has to be secure, efficient, comprehensible and controllable. This is especially important in consideration of different internal and external partners who are involved in the process (for example business units, clients, suppliers, development service organizations, partners, different development and manufacturing locations). Relevant, product specific data and documents as well as the know-how of all involved partners needs to be available on time and the qualified supplier integration has to be optimized (i.e. Supplier selection, Classification).

The Challenge

- ✓ Services and responsibilities should be clearly defined.
- ✓ The project plan structure should be flexible and include phases with milestones.
- ✓ Activities and checklists, scheduling, resource planning and project cost calculation should be seamlessly integrated with SAP ERP

Consequently the whole process is managed securely, comprehensively and productively.

Your advantages - our solution

Our method enables...

- ✓ the co-operation of various teams in different departments, locations and businesses and with different organizations, processes and applications to reach common goals. The interaction and cooperation of people and teams in your organization will be optimized. Responsibilities and joined activities with their continuous flow of information
- ✓ are coherently, harmonized, efficiently and comprehensively structured.
- ✓ the management and joint processing of product data, even out of various CAD-applications. Consequently you have an universal change and project management of your virtual project teams. Depending on the project for example customers, suppliers, development service organizations and authorities
- ✓ the efficient management of your project structures, configurations, changes and programs. The collaboration process accommodates significant differences in organizational structures, for example separation into various companies and locations. Customized IT solutions, which support specifically the collaboration over long distances, will be integrated as well.

Functionality overview

SAP cProjects are supporting the operational project management through a phase oriented project methodology.

- ✓ Flexible project structure through phases with gates, responsibilities, check lists and mile stones.
- ✓ Your projects are standardized through the use of templates.
- ✓ Planning through interactive Gantt Chart.
- ✓ Multi-Project management
- ✓ Project versioning, simulation, snap shots und status reports
- ✓ Resource planning
- ✓ Collaborative processing of tasks with external partners through SAP cFolders

- ✓ Clear definition of deliverables and responsibilities
- ✓ Various integration scenarios with SAP, i.e.: PS, FI, CO, CATS, DVS, EasyDM, QM, etc.

Your benefits

- ✓ We will provide recommendations and guidance through a collaboration fitness check ("per Morphologischem Kasten).
- ✓ Our Best Practice guidance will produce Quick Wins
- ✓ The goal oriented project plan for realization of the collaboration scenario will be created through advanced analytics.
- ✓ Your business process requirements will be mapped to the corresponding system functionality.
- ✓ Your business scenario will be balanced rapidly with your collaborative engineering needs through our Implementation Roadmap.

YOUR SUCCESS-OUR GOAL

GOPA ITC is your international consulting service partner for the support and the successful completion of IT projects. We open new innovation potentials and convert visions efficiently from concept to a fully functioning IT Solution.
