

Requirements for Today's IT Departments

The field of information technology is growing rapidly and in today's challenging economic climate, businesses are required to redouble their dedication to innovation and flexibility. More than ever before, IT departments must strive to make a direct and measurable contribution to the success of a business and to engage their core competencies in support of their company.

In order to efficiently integrate new technologies into their companies, IT departments must be able to draw on comprehensive knowledge of different processes.

Thanks to the new technologies of system virtualization, companies can employ innovative concepts such as "private cloud computing" and "landscape as a service." Such advances are bringing about enormous improvement in the provision and operation of IT systems while generating enormous potential savings.

While technologies and tools are generally available for purchase on the market, the knowledge needed to efficiently implement these tools can only be gained by lots of hard work by a company's IT department over a long period of time.

Constant cost pressure is accompanied by high demands on quality of provision and availability. IT departments are faced with the challenge of industrializing their own processes to a greater extent. With IT sourcing, the increasing pace of globalization offers remarkable potential for cost reduction. The only way organizations can tap this potential is to establish efficient sourcing processes and ensure access to the necessary resources.

Successful IT departments combine business know-how with technological expertise. An ideal service management helps to deploy innovative solutions for your company.

Our purpose - Your success

At GOPA IT, we offer consultation services that are specifically tailored to the needs of your IT department.

Technology

For years, GOPA IT has been using the latest technologies in the areas of adaptive and private cloud computing and has developed innovative processes for system provision and system operation. These systems have already been successfully implemented by numerous customers and in international project initiatives. In our implementation work, we focus on direct knowledge transfer so that we can help your internal IT department to efficiently implement and confidently use cutting-edge technologies.

Business Processes

Our expert IT business consultants support you with their outstanding expertise - from engineering all the way to the shop floor. We implement complete solutions - from the initial conception to your optimized IT and ERP systems. We can also fill key roles in your company in order to develop successful projects alongside your in-house experts.

IT Service Management

With our years of experience, and with optimized IT service management and IT sourcing, we help your IT organization to customize its processes and services to the individual needs of your business, and to reduce costs and keep them down.

In order to fulfill your individual needs, we assemble qualified teams in our Innovation Centers, which operate in Germany and the United States in cooperation with our valued partners. These centers offer efficient access to experts in the relevant fields as well as tools, methods, cutting-edge technologies, and customizable systems for every task or project. With the help of our Innovation Centers, we have been able to successfully support over 2,000 customer projects and initiatives worldwide.
